Flow of Presentation

Introduction

Research Objectives

The primary objectives for the **quantitative survey** mirrors that of the focus group discussions are:

- Explore the current usage behaviour of the Harbour
- Gauge current perception of the Harbour in terms of imagery associations and satisfaction towards various amenities along the Harbour
- Understand the public's perception in relation to the level of reclamation, construction/ maintenance activities along the Harbour
- Explore the ideal future of the Harbour
- Understand the current level of awareness of various Harbour related development projects
- Determine the general public's current and future involvement in Harbour-related development projects

Research Design

Data Collection Method

- Telephone interviewing methodology was used. Each interview lasted for approximately 15 minutes in order to hold respondents' interest, ensure high-quality responses throughout the interview, and avoid refusal and half-way drop-out.

Target Respondents

- Land-based non-institutional population of Hong Kong who are aged 15 and above and are able to speak in Cantonese, Putonghua or English. Kish Grid method was adopted during the screening process to select the individual within the household to be interviewed.

Sample Size

- A total of 1039 interviews (i.e. unweighted base) were enumerated.

Sampling Frame

- ACNielsen Master Sampling Frame for telephone interviewing that sources from Hong Kong Island, Kowloon and New Territories Residential Telephone Directory was used.

Fieldwork Period

- Fieldwork period lasted from 12 December 2005 to 23 January 2006

Response Rate

- Response rate = 60%

Weighting

- Weighting was applied to adjust for the true population on Hong Kong Island, Kowloon, New Territories and Islands in terms of (1) age and (2) sex according to 2004 Government Statistics.

Usage of The Harbour

Able to View Victoria Harbour from Home

- Only 9% of respondents are able to view Victoria Harbour from their homes

Base: All respondents ('000) 5,800
Unweighted base: 1,039

Ref: Q9, 10

Able to View Victoria Harbour from Workplace/ School

- However, 22% of those working or studying are able to view Victoria Harbour from their workplace/ school

Base: Those who are working or studying ('000) 3,685
Unweighted base: 695

Ref: Q11, 12

Frequency of Activities Done Along the Harbour

- Overview

- “Taking ferry to cross Harbour”, “viewing the Harbour at night” or “strolling along the harbourfront” are the three most common activities done along the Harbour.

	Ever Done %	At least once in 6 months %	At least once in 3 months %
Taking the ferry to cross the Harbour	91	52	38
View the Harbour at night	89	51	34
Visit facilities along the Harbour	88	39	18
Strolling along the harbourfront	86	52	34
View the Harbour from The Peak	84	21	8
Sitting and chatting with friends	79	37	24
Take photos along the Harbour	79	26	11
Choosing a restaurant/ bar	61	27	18
Watch “Symphony of Lights”	57	23	12

Base: All respondents ('000) 5,800
Unweighted base: 1,039

Usage Segmentation

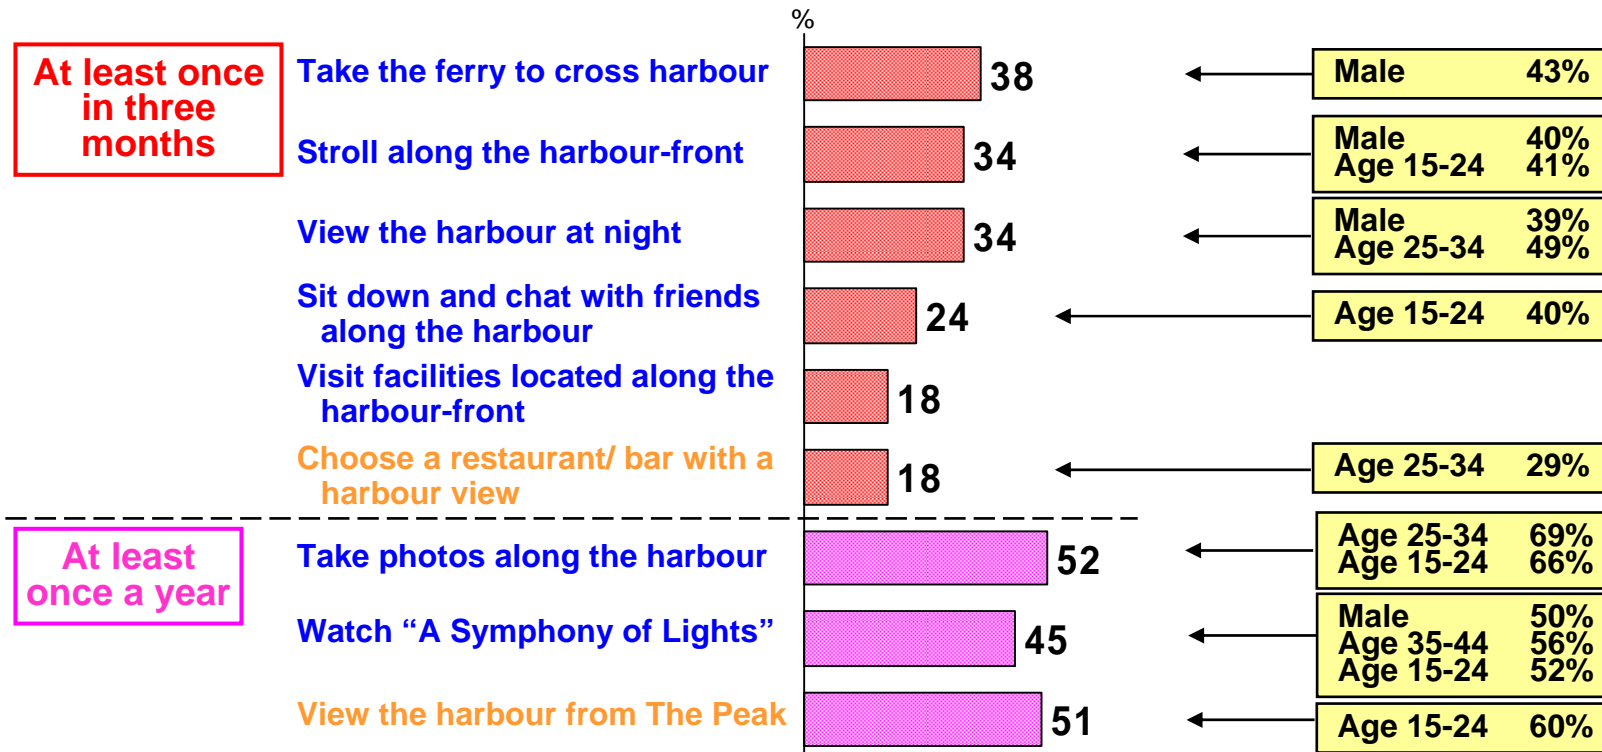

Frequency of Doing Activities Along the Harbour

➤ Usage frequency was explored

- ↪ Looking at the demographic characteristics of those undertaking several activities
- ↪ Developing an index of usage

Frequency of Doing Activities Along the Harbour

- Overall, male and younger age groups (aged 15-24 and 25-34) are significantly more active users of the Harbour
- Those aged 15-24 are more frequently “strolling” (41%) and “sitting down and chatting with friends” (40%)
- Those aged 25-34 are more attracted by the Harbour views with about half (49%) of them “view the Harbour at night” and three in ten (29%) “choose a restaurant/ bar with a harbour view”

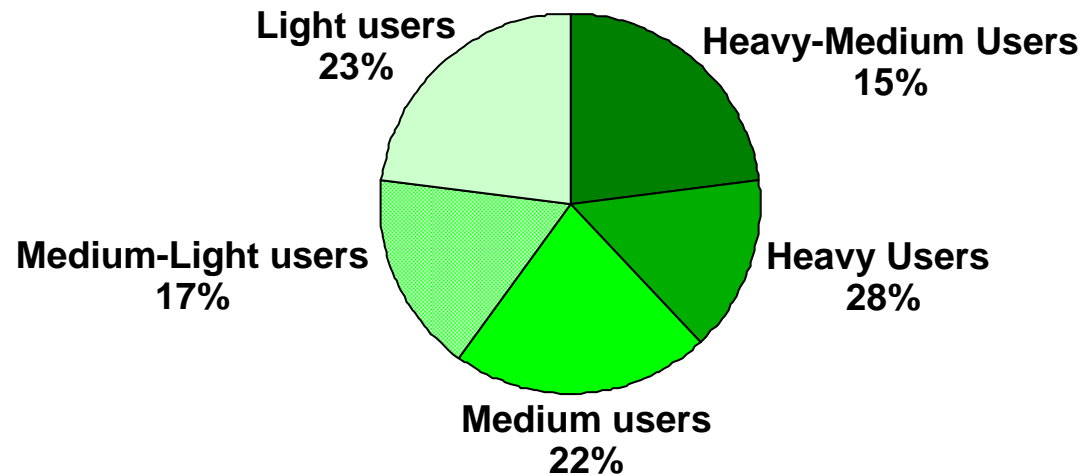

Base: All respondents ('000) 5,800
 Unweighted base: 1,039

Harbour Usage Segmentation - Segment Size

User Types

Definition

Light User	Those who have involved in <i>ALL activities less than once in 6 months</i>
Medium to Light User	Those who have involved in <i>ANY activities once in 4-6 months</i>
Medium User	Those who have involved in <i>ANY activities once in 2-3 months</i>
Heavy to Medium User	Those who have involved in <i>ANY activities once a month</i>
Heavy User	Those who have involved in <i>ANY activities at least once every two weeks</i>

Harbour Usage Segmentation - Key Demographics

- Light users of the Harbour tend to be older (35% aged 55+) and retirees and thus less affluent
- Heavy and heavy-medium users have higher household incomes

Perceptions of The Harbour

Positive Associations with Victoria Harbour

- Overview

- Majority of the respondents have positive associations with the Harbour (85%)
- 54% of the positive associations are linked to views, beautiful scenery and bright and colourful lighting
- Ships, the quality of sea and buildings were mentioned by 21%, 20% and 19% respectively

Any Positives

- View** (Beautiful scenery of Victoria Harbour/ bright & colourful lighting) 85%
- Ships** (Different types of ships crossing the harbour) 21%
- Sea** (Perception of harbour in the past/ depth and width of harbour) 20%
- Buildings/ facilities/ places/ landmarks along the harbour** 19%
- Events/ activities along the harbour** (Watch fireworks) 11%
- HK economy** (Attract many visitors/ busiest harbour/ drives HK's economy) 6%
- Identity of HK** (Can represent HK/ famous/ unique) 6%
- Benefits of reclamation** (Can provide more new land/ ease traffic jam) 3%

Others (each less than 3%)

Base: All respondents ('000) 5,800
 Unweighted base: 1,039

Ref: Q13

Negative Associations with Victoria Harbour

- Overview

- Negative associations were mentioned by more than two-thirds of respondents (69%)
- 48% of these negative associations are linked to the “bad consequences caused by reclamation” and 35% to “pollution”

Any Negatives

Bad consequences caused by reclamation (Narrower harbour/ larger sea waves/ less spectacular view)

Pollution (Water/ air/ land/ noise)

Buildings/ facilities (Too many (tall) buildings/ affects the view)

View (Scenery is more blurred/ unnecessary lighting or fireworks)

Ships (Too many ships crossing the harbour/ affect the view)

Surrounding environment (Heavy fog/ over-crowded)

Others (each less than 3%)

Base: All respondents ('000) 5,800
Unweighted base: 1,039

Ref: Q13

Positive Associations with Victoria Harbour (I) by Sex and Age

- Women tend to link their positive association more to the view more than do men
- Older people tend to be more nostalgic about Victoria Harbour in the past

Brand Imagery of the Harbour

- The harbour is widely considered to have an “intrinsic value”
- Respondents totally agree/ agree that it to be “something shared by all HK people” (90%), “valuable to me” (85%) and “symbolises the prosperity and success of HK” (83%)
- An overwhelming majority (90%) consider it visually appealing at night compared with daytime (56%)
- Half of the respondents (52%) totally agree/agree that “High-rise buildings spoil the panorama from the harbour”

Brand Imagery of the Harbour by Sex and Age

- Overall younger people have a slightly more critical view on most of the brand dimensions of the harbour
- Older people have higher emotional attachments to the harbour with 80% agreeing that the “harbour brings back a lot of good memories”

Top-2-Boxes
Totally agree/ agree

Evaluating the Features of Victoria Harbour (I)

- 46% of respondents had neither a positive or negative overall impression of Victoria Harbour, 46% a positive impression and only 8% a negative impression
- Slightly more than 40% had neither a positive or negative view on most features of the harbour
- Features deemed to be very good/good included :“Promenade/ walkway along the harbourfront” (51%) , “quality and design of the buildings and amenities along the harbour-front” (49%) and “places for people to run, to cycle, to do tai chi, children’s playgrounds, etc. along the harbourfront” (45%)
- Features deemed to be very poor/poor included Air quality (38%), Width of the harbour (45%) and Water quality (57%)

Overall Impression

Promenades/ walkways along the harbourfront

Quality and design of the buildings and amenities along the harbour-front

Places for people to run, to cycle, to do tai chi, children's playgrounds etc. along the harbourfront

Whether it is easy to walk to the harbourfront

Open-air restaurants, cafes, bars, kiosks

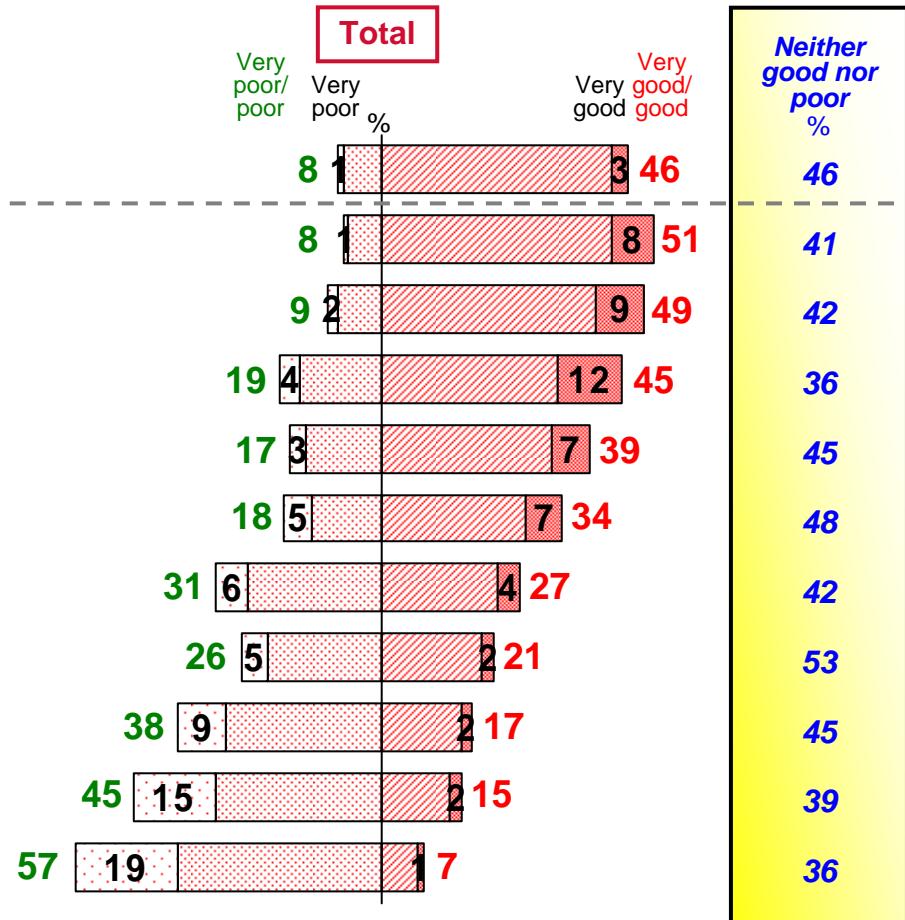

Green areas/ plantings along/ close to the harbour-front

Roads for vehicles along the harbour front

Air quality

Width of the harbour

Water quality e.g. rubbish or waste in the water, smell or clarity of water, etc.

Frequency of Voicing Out Opinions about Harbour-Related Projects Previously

- A vast majority (87%) of respondents have never had any involvement in harbour-related projects in the past
- Men (84%) and those aged 25-34 (81%) are slightly more involved

↑/↓ Significantly higher/ lower than Total at 95% confidence level

Ref: Q24

Likelihood in Voicing Out Opinions about Harbour-Related Projects in Future

- Only three in ten indicate they are very likely/ likely to become involved in harbour-related projects in the future
- Older people (34% aged 45-54 and 36% 55+) are even less likely to become involved

↑/↓ Significantly higher/ lower than Total at 95% confidence level

Ref: Q25

Future of The Harbour

Ideal Future of Victoria Harbour

- A vast majority (88%) favour having “green areas/ plantings along/ close to the harbourfront”, followed by ground-level pedestrian facilities, such as “promenade/ walkways along the harbour-front” (77%) and “pedestrian access to the harbour at the ground level” (73%)
- By contrast “residential buildings” (9%) and “commercial buildings” (14%) received the lowest level of support
- “Water activities such as boating, swimming, fishing, etc.” and “transportation facilities and infrastructure” were favoured by less than a third of the people, i.e. 25% and 31% respectively

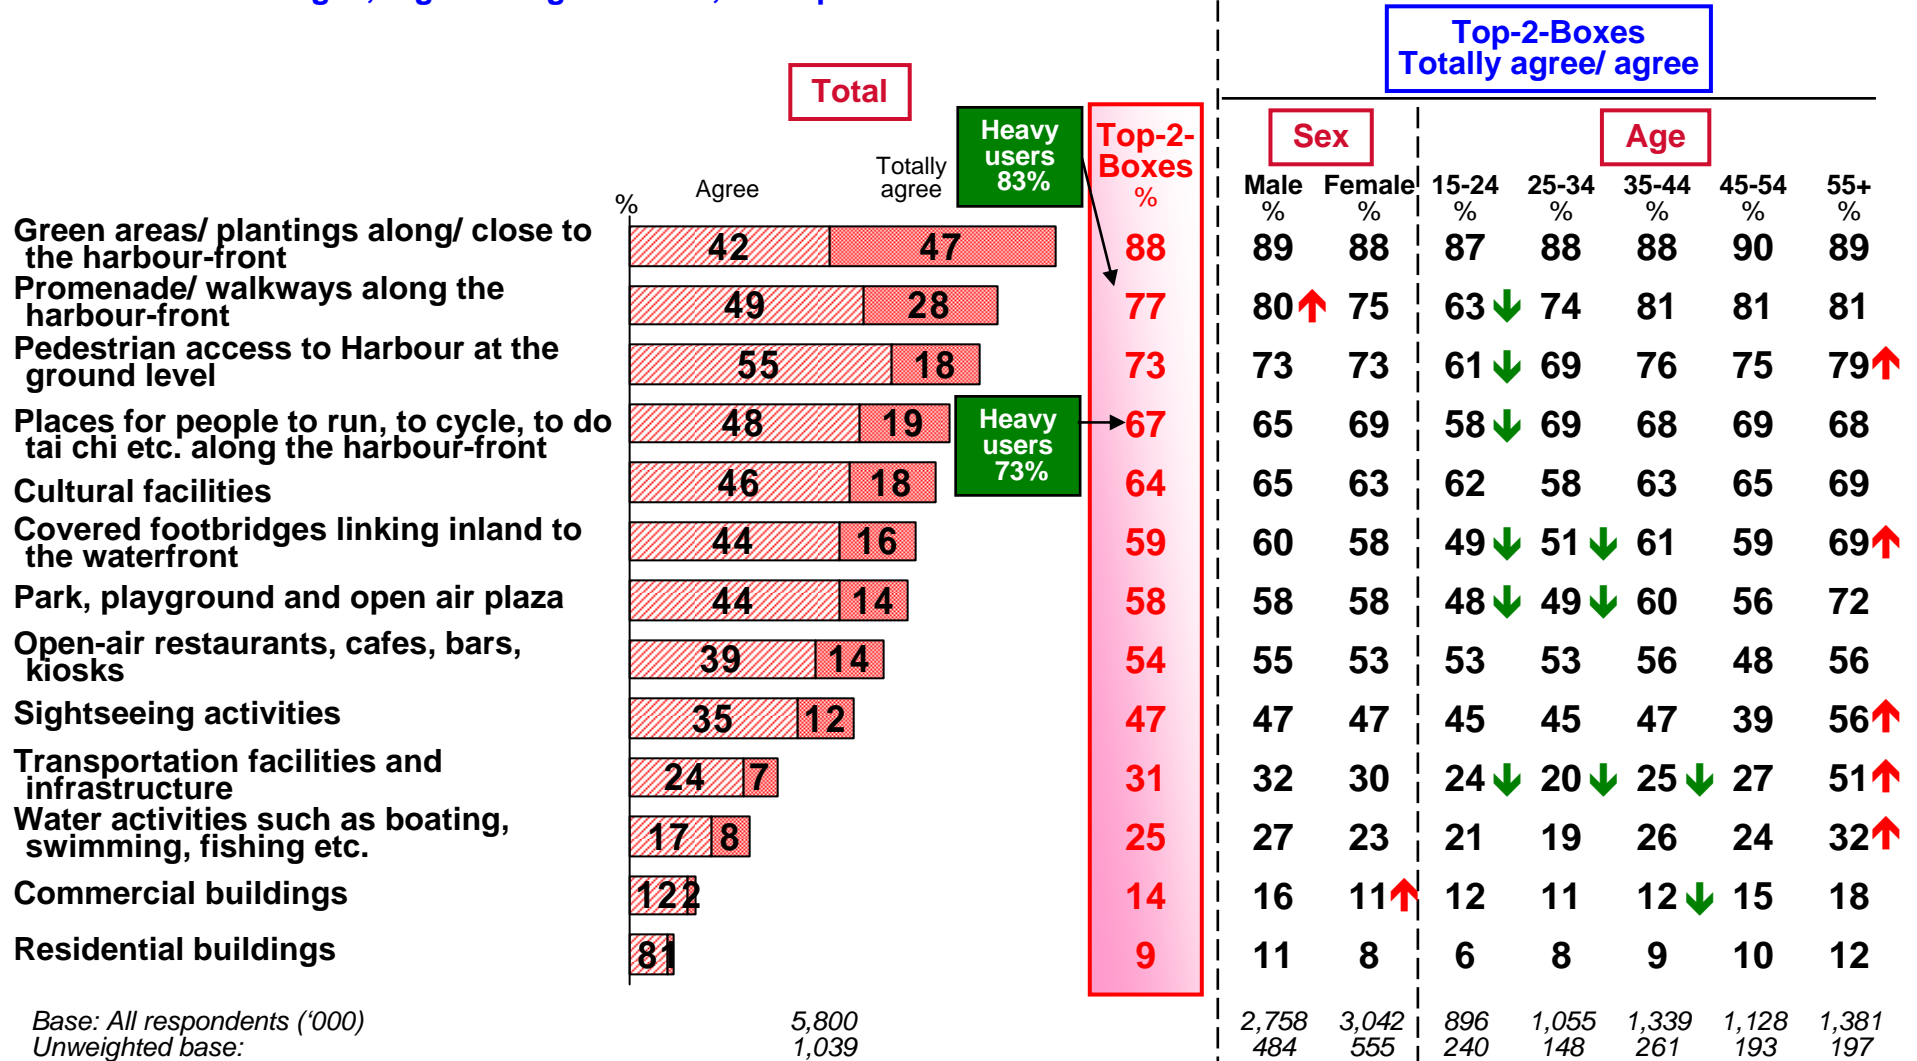

Green areas/ plantings along/ close to the harbour-front
 Promenade/ walkways along the harbour-front
 Pedestrian access to Harbour at the ground level
 Places for people to run, to cycle, to do tai chi etc. along the harbour-front
 Cultural facilities
 Covered footbridges linking inland to the waterfront
 Park, playground and open air plaza
 Open-air restaurants, cafes, bars, kiosks
 Sightseeing activities
 Transportation facilities and infrastructure
 Water activities such as boating, swimming, fishing etc.
 Commercial buildings
 Residential buildings

Ref: Q19

Ideal Future of Victoria Harbour by Sex and Age

- There are major differences between age groups, with older people (aged 55+) favouring Promenade/ walkways, Covered footbridges, Sightseeing activities, Transportation facilities and Water activities

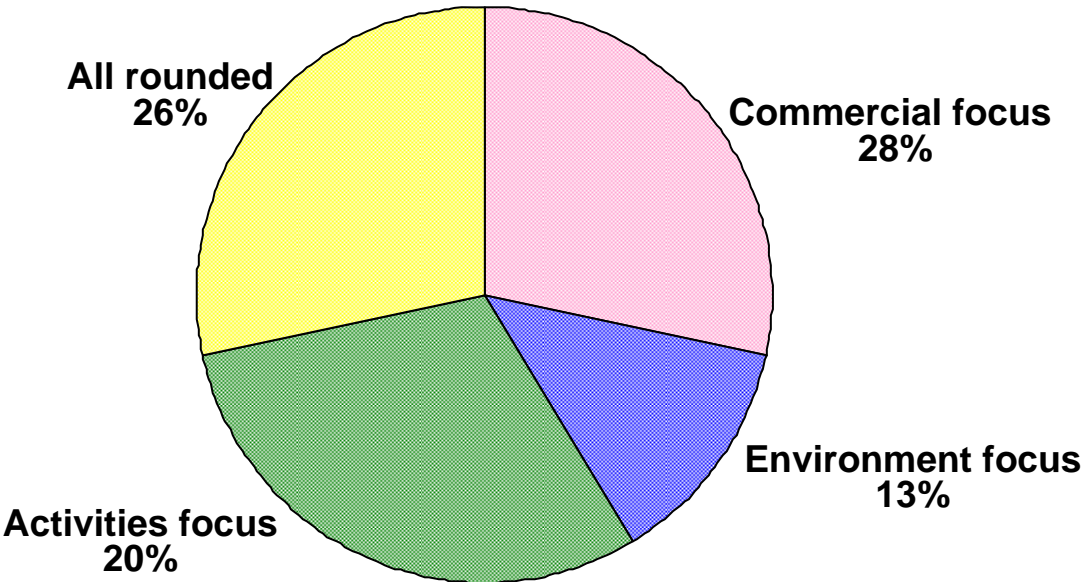

↑/↓ Significantly higher/ lower than Total at 95% confidence level

Ref: Q19

The Ideal Harbour Segmentation

- **Cluster analysis** is a statistical technique which involves partitioning of the target population into groups with similar needs and/or characteristics who are likely to exhibit similar imagery perceptions or purchase behaviour
- In this study, cluster analysis was performed to identify attitudinal segments within the total sample based on their level of agreement in including certain facilities / structures to create their Ideal Harbour
- Demographic patterns are then investigated for each segment to give a better understanding of their demographic profile
- Other questions such as overall perception of the Harbour, attitude towards reclamation and maintenance work along the Harbour are also investigated to gauge the underlying 'reasons' for their choices in creating their Ideal Harbour.
- Results shows that there are four groups which exhibit subtle but important differences about their Ideal Harbour:
 - ↪ **Commercial Focus**
 - ↪ **Environment Focus**
 - ↪ **Activities Focus**
 - ↪ **All rounded**

The Ideal Harbour Segmentation

Base: All respondents ('000) 5,800
Unweighted base: 1,039

The Ideal Harbour Segmentation

- Segment size & Key Demographics

- Women and younger people (aged 15-34) have a stronger preference towards more greening and open space and less facilities/ buildings (Environment focus)
- Those who prefer more residential / commercial buildings as well as transport facilities, while having a similar sex profile as the overall population, have a slightly lower household income and a slight skew towards the young (aged 15-34)

Key Demographic Characteristics

* PMEB: Professionals, managers, executives, businessmen

↑/↓ Significantly higher/ lower than Total at 95% confidence level

Ideal Harbour Segment Characteristics - I

Commercial Focus (28%)

- Even sex as well as working / non working split
- Least affluent across all segments (MHI: \$21,999)
- In line with overall population in terms of overall perception towards harbour (44% very good/good; 5% poor/very poor)
- Higher acceptance towards current magnitude of reclamation (36% think current level of reclamation is about right) and frequency of construction / maintenance work (34% think current frequency is about right)
- Perception of ideal harbour → more buildings (residential or commercial) as well as more transport facilities (eg. Public transport interchange, flyovers, bypasses etc)

Environment Focus (13%)

- Slight skew towards females (62%) and those at younger ages (15-34) (43%) relative to other segments
- In line with overall population in terms of affluence (MHI: \$25,929)
- Worst impression towards the harbour amongst all segments (36% good/very good rating)
- Most dissatisfied with current reclamation and construction activities along the harbour (78% think current reclamation magnitude is more than sufficient and 63% think construction / maintenance is too frequent)
- Perception of ideal harbour → more green areas and more open space, less facilities / buildings (residential or commercial) and sightseeing activities

Ideal Harbour Segment Characteristics - II

Activities Focus (30%)

- Even sex split, marginal skew towards middle aged (35-54)
- Predominantly working class (62%) but higher incidence of PMEBS
- Most affluent amongst all segments (MHI : \$29,722)
- In line with overall population in terms of overall perception towards harbour (42% very good/good; 11% poor/very poor)
- Most dissatisfied with current reclamation and construction activities along the harbour (77% think current reclamation magnitude is more than sufficient and 61% think construction / maintenance is too frequent)
- Perception of ideal harbour → more green areas and open space as well as easy access to harbour (footbridges / pedestrian access at ground level), also favour playgrounds, parks and promenades along the harbour, less facilities / buildings (residential or commercial)

All rounded (28%)

- Even sex split, relatively more in the older ages (55+) and retired (25%)
- Relatively less affluent (MHI: \$22,621)
- Best impression towards the harbour amongst all segments (57% good/very good rating)
- Higher acceptance towards current magnitude of reclamation (38% think current level of reclamation is about right)
- Perception of ideal harbour → 'more of everything' – buildings / facilities, green areas, parks, restaurants, cultural facilities, sightseeing activities

Harbour Aspects to be Improved

- The public are most concerned about the Pollution/ Environmental issues (73%), especially about the reduction of water pollution (41%), reduction in littering (33%) and more greening (22%)
- One-third of the respondents also call for a stop in further reclamation

	%		%
Pollution/ Environment	73	Buildings/ Facilities	30
Improve water pollution	41	Buildings/ construction work	12
<i>Sea pollution need to improve</i>	31	<i>Don't build more buildings along the harbour</i>	7
<i>Do not allow waste discharged into the harbour</i>	5	<i>Restrict to build tall buildings nearby the harbour which would affect the scene</i>	3
<i>Reduce/ remove bad smell of sea</i>	3	Exercise/ sports facilities	10
<i>Reduce greasy dirt</i>	3	<i>More leisure facilities</i>	8
<i>Improve sewage system</i>	3	Promenade	4

Ref: Q20

Harbour Aspects to be Improved by Sex and Age

- Younger groups (76% and 77% respectively for those aged 15-24 and 25-34) express the highest level of concern regarding the pollution/ environment nearby the harbour
- Even the elderly (aged 55+) showed a high level of concern (66%)

Base: All respondents ('000)

Unweighted base:

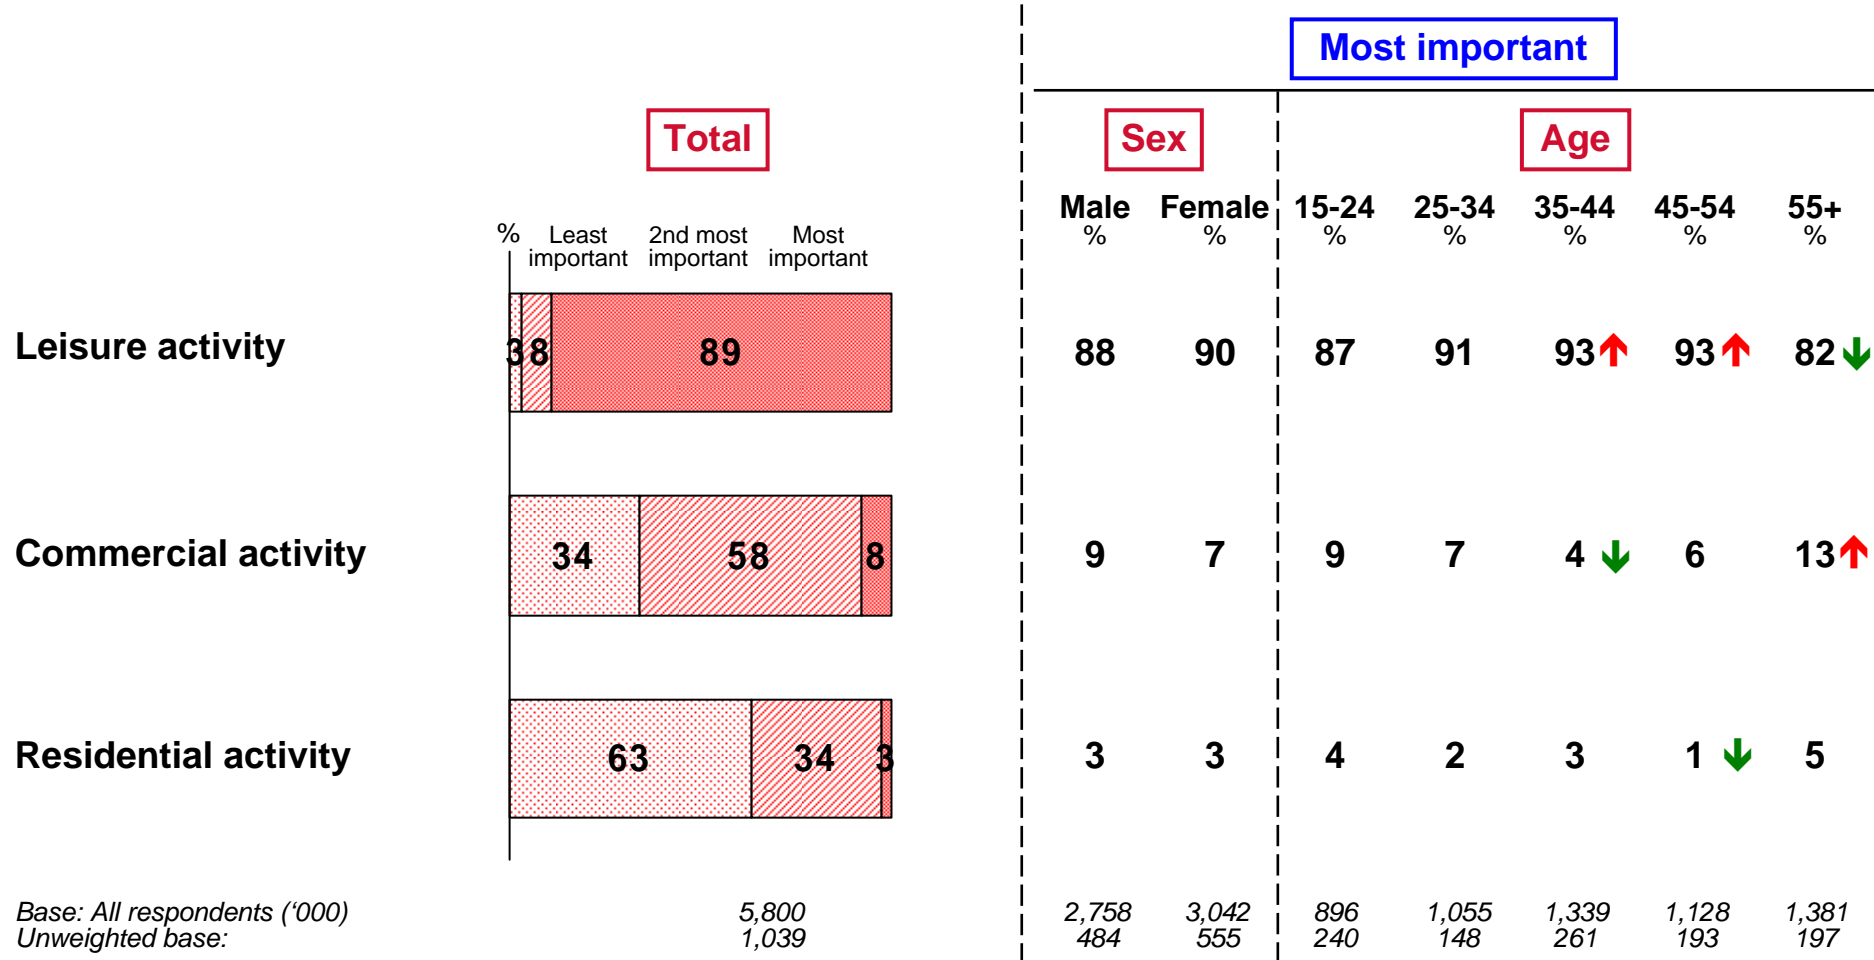

* less than 0.5%

↑/↓ Significantly higher/ lower than Total at 95% confidence level

Ref: Q20

Priority of Land Development along the Harbour

- Consistent with their views on the ideal future of the harbour, a large majority (89%) of respondents stated priority should be given to leisure activity, followed by commercial activity (66%) and residential activity (37%)
- Those aged 35-54 opined that leisure activity was the most important priority

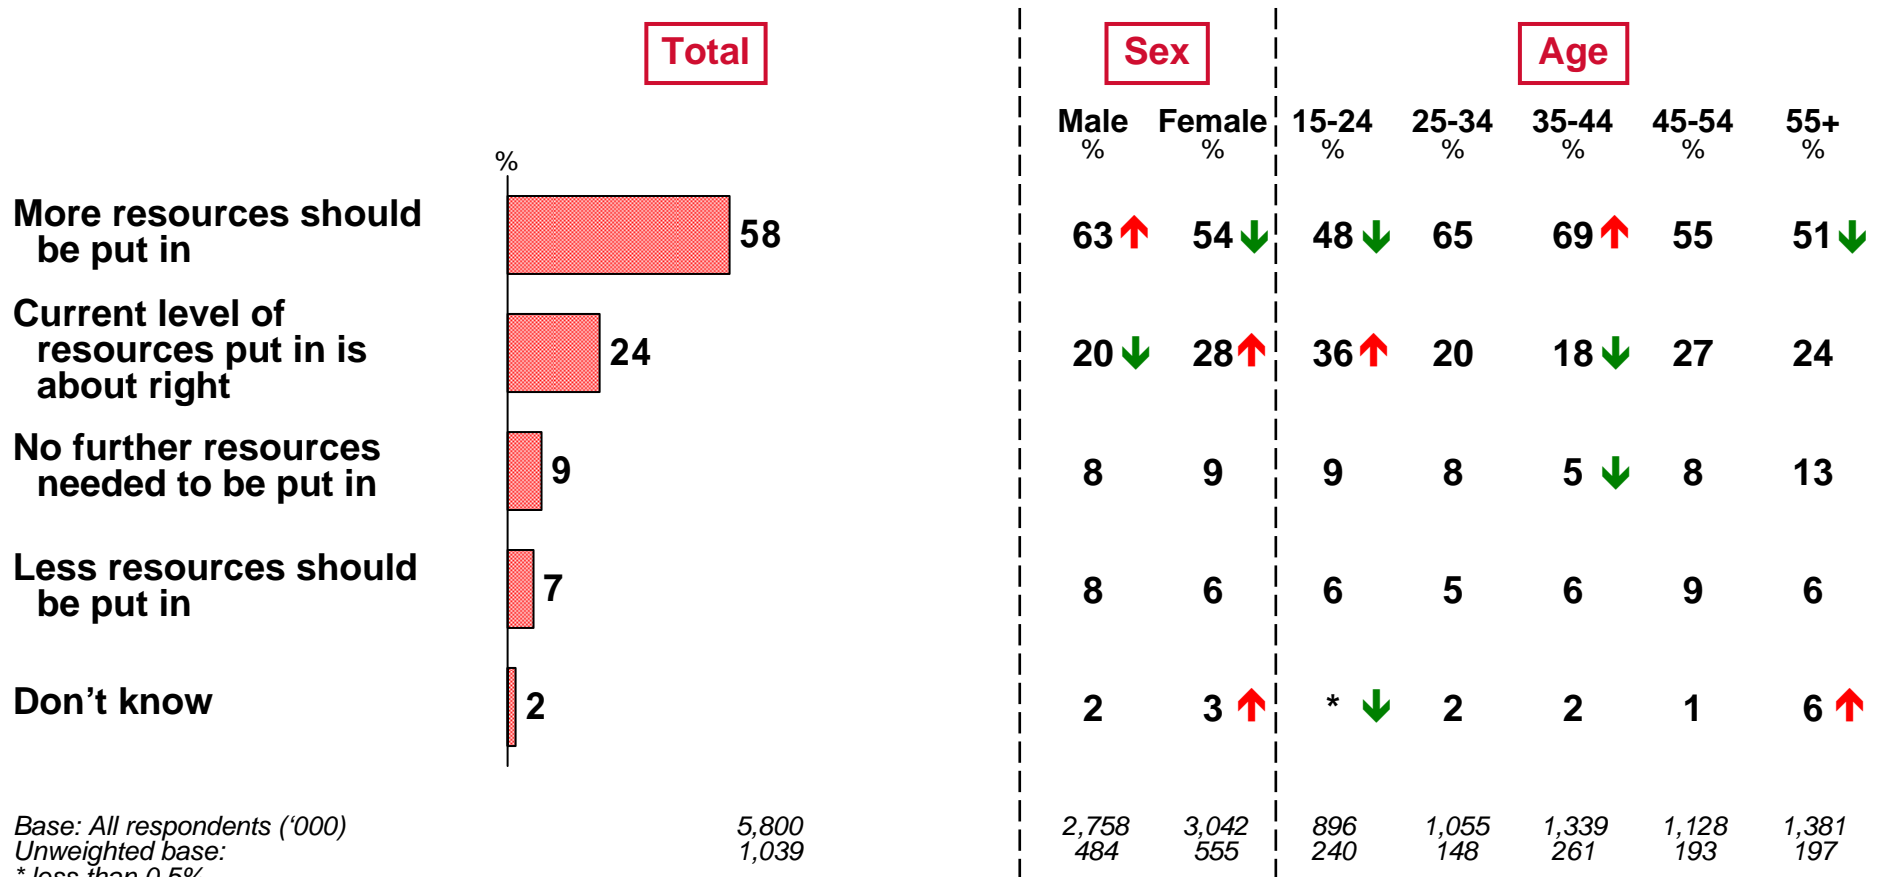

↑/↓ Significantly higher/ lower than Total at 95% confidence level

Ref: Q21

Evaluation of Current Level of Resources to Harbour

- Six in ten (58%) believed that more resources should be invested in the harbour
- This view was particularly strong among men (63%) and those aged 25-44 (65% for 25-34 and 69% for 35-44)
- Around a quarter (24%) considered current level of resources invested was right
- Women (28%) and those aged 15-24 (36%) and 45-54 (27%) held this view more strongly
- Only 16% favored no further investment or a reduction in investment

↑/↓ Significantly higher/ lower than Total at 95% confidence level

Ref: Q22

Executive Summary

Executive Summary - I

Current Perception of the Harbour

- Overall, the Harbour plays a significant role among the general public as the vast majority of the respondents agree that the Harbour is shared by all Hong Kong people, is valuable to me and symbolizes the success and prosperity of Hong Kong (80%+ 'totally agree/ agree' rating)

- This perception is reflected by the public's strong association of the Harbour with...
 - ↪ The beautiful scenery, especially during nighttime with the attractive and colourful lightings along the Harbour – a sign of vibrancy of the Harbour as well as Hong Kong
 - ↪ The variety of ships and the tall and beautiful buildings along the Harbour – another indication that the Harbour is dynamic and lively
 - ↪ Hong Kong people's past memories about the Harbour – wider, cleaner, fresher

- Nonetheless, almost half of the Hong Kong people view the Harbour as 'very good/ good' (46%)
 - ↪ The public's negative impression of the Harbour is because of reclamation; the narrowing of the Harbour as a result of the reclamation, the frequency of reclamation, and the detrimental effect it has on the overall appearance of the Harbour
 - ↪ In addition, air quality, water quality and width of the Harbour also receive poor perception ratings
 - ↪ It is worth noting that respondents are less 'satisfied' with the level of greening along the harbour

Executive Summary - II

Current Perception of the Harbour (con't)

- Those aged 55+ are more nostalgic about the Harbour in the past, and hence, are more disappointed with the consequences of reclamation
- Younger adults, on the other hand, are more concerned with the pollution
- The majority of Hong Kong people think that the magnitude of reclamation currently undergoing is more than sufficient and over half think that the current frequency of construction and maintenance is too frequent

Executive Summary - III

Ideal Future of the Harbour

- More greening areas/ plantings are almost universally agreed as a direction for the ideal harbour's future improvement and more promenades / walkways along the waterfront and more ground level pedestrian access to the harbourfront also receive high levels of support
 - ↪ Possibly with more good old memories, those aged 55+ express stronger urge to enhance the Harbour, e.g. by having greater pedestrian access to Harbour at the ground level
 - ↪ On the other hand, the younger generation simply look for a spacious, quiet and peaceful place where they can truly relax and enjoy their leisure time
- Other facilities which receive support to enhance the future development of the Harbour include
 - ↪ Cultural facilities
 - ↪ Covered footbridges linking inland to the waterfront
 - ↪ Park, playground and open air plaza
 - ↪ Open-air restaurants, cafes, bars, kiosks
- In addition, reducing water and air pollution, the amount of litter in the Harbour and cutting down the level of reclamation are other key areas suggested as improvements
- Commercial and residential buildings are less favoured to be included in future enhancement of the Harbour
- In conclusion, the majority of Hong Kong people feel that the current level of resources put into the Harbour is insufficient and should be increased

Appendix I - Demographics

Socio Demographics - I

	Total	Sex		Age
